

# WP Snowy Userguide

Thank you for your purchase!

You can start using this plugin by installing it to your WordPress site.

Login to your WordPress Admin, then visit Plugins -> Add New -> Upload.  
After that activate the plugin.

Once you have activated the plugin, visit the WP Snowy.

## Troubleshooting

By default, this plugin will work in 99% of WordPress themes out there. If after you save your WP Snowy setting there is no snowfall show up on your blog, then there are 2 possibilities:

### **1.) jQuery conflict**

Try to deactivate all plugins and see if WP Snowy works. If it works, then 1 of your plugins are causing the jQuery conflict.

### **2.) Theme issues**

If it turns out Wp Snowy still not working after you deactivate all plugins, then perhaps the theme that your site is using doesn't have `wp_head` or `wp_footer` hook.

Try to activate the default theme (Twenty Twelve or Twenty Thirteen) and you will find that Wp Snowy will start to functions.

## Plugin Updates

If there is a new version for the plugin, you will see a notification on your Updates dashboard and you can update it using the built-in 1-click updater.
